EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Vincent Gustafson on 11/20/08.

The application has been amended as follows:

In the claims:

- a) please cancel claims 31-39 and 41-47;
- b) please change claim 11 to depend on claim 10;

2. The following is an examiner's statement of reasons for allowance:

Regarding independent claim 1, the Amendola reference discloses a hydrogen generation system "100" comprising: a reservoir "120" for containment of a NaBH₄ solution (carrier material) "140" that is adapted to hold a volume of NaBH₄ solution in isolation from an exterior environment of the reservoir and a reaction chamber "180" having a hydrogen generation catalyst system "170" (See column 13 line 62 to column 14 line 3 and Figure 9). It also discloses a housing "120" comprising a gas collection compartment "130" and a gas storage compartment "140" (See Figure 9). The Kuespert reference discloses a gas recovery device "10" comprising: a) a shell (housing)"22" comprising a gas collection compartment "26" and a gas storage

compartment (not labeled); b) a plurality of permeation units "30" that are tubular elements disposed in the shell i) having one or more open ends in fluid communication with the gas collection compartment and ii) extending from the gas collection compartment into the gas storage compartment, wherein each of the permeation unit comprises a tubular wall permeable to a target gas and defining a bore side and a shell side; c) an epoxy resin which together with the tubular walls, sealingly isolates the gas collection compartment from the gas storage compartment by potting the ends of tubes "30"; and d) a carrier material is disposed in the gas storage compartment on the shell side of the permeation units (See column 4, lines 5-36 and Figure 2). The Nemser reference discloses hollow fibers (gas and liquid permeable) coated with a thin layer of PDD copolymer (gas permeable/liquid impermeable) that have an outer diameter of 800 μm , wherein the coated hollow fibers are used to degasify a liquid (See column 5, lines 19-22, column 8, lines 4-6, column 9, line 5, and column 10, lines 31-32).

However, Amendola et al does not expressly teach a plurality of microtubular elements disposed in the housing, having an outer diameter in the range of from 10 micrometers to 1 millimeter; and Kuespert and Nemser et al do not expressly teach a housing adapted to hold a volume of carrier material in isolation from an exterior environment of the housing. In addition, the combination of Kuespert with Amendola would require a substantial reconstruction or redesign of Amendola's apparatus and a change in basic operating principles of Amendola's apparatus because Amendola relies upon gravitational separation of hydrogen gas from metal hydride solution and Kuespert teaches pressure-driven separation of gas from liquid via a permeable membrane.

3. Claims 1-14, 16-30, 49, and 50 are allowable. The restriction requirement between Species I(a)-I(h), as set forth in the Office action mailed on 4/9/07, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 2-9, 11-14, and 26, directed to Species I(a)-I(e), I(g), and I(h) are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tony Chuo whose telephone number is (571)272-0717. The examiner can normally be reached on M-F, 9:00AM to 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on (571) 272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
